Fruit for Thought

Using Parameterized R Markdown reports to explore the Pomological Watercolor Collection.

Building the report

Any report can become parameterized.

```
---
params:
  fruit: "apples"
---

The fruit is `r params$fruit`.
```

R Studio

Rendering from code:

```
rmarkdown::render("parameterized.Rmd",
                  params = list(
                      fruit = "pears"))
```
